DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
3. Claims 1, 6, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art as depicted in FIG. 3 of the present application in view of Kopmeiners et al. (Kopmeiners; 5,917,865; cited and applied for the first time).

The difference between the claimed invention and the Applicant's admitted prior art is that the claimed invention performs digital signal processing. However, Kopmeiners plainly teaches AGCs performing digital signal processing. Therefore, it would have been obvious even to one of ordinary skill in the art at the time of the invention to modify the AGCC and the NCC of the Applicant's admitted prior art in order to perform digital signal processing as taught and motivated by Kopmeiners.

Allowable Subject Matter

4. Claims 2-5, 8, and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hara and Hashimoto also teach the relationship between AGCs and digital signal processing.

Response to Arguments

6. Applicant's arguments with respect to claims 1-9 have been considered but are moot in view of the new ground(s) of rejection.
